Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS

- "I need to manage my farm activities easily."
- "I want to know the right time for irrigation and fertilizer."
- "I need to keep track of my crops and farm expenses."

THINKS

- "How can I manage all my farm information in one place?"
- "Which crop management method is suitable for my farm?"
- How can I reduce unnecessary expenses?"

PERSONA NAME
(Role / User Type)

DOES

- Records crop and farm details.
- Checks irrigation, fertilizer and pest management activities.

FEELS

- Feels worried about crop management.

- Feels confused when farm information is not organized.

- Feels confident when all farm details are available in one system.

- Updates farm information and checks reports.
