Solution Requirements

Date	29 September 2026
Team ID	6ab2abc01266c775575a9dda
Project Name	Farm Management System
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	*Farmers can securely register, log in and log out using their credentials.*	*High*
2	Authorization levels	*Farmer can manage their own farm, crop, irrigation, fertilizer and activity details. Admin can manage system records.*	*High*
3	External interfaces	*The system provides a*	*Medium*

		simple web interface for farmers to enter and view farm information.	

4	Transactions processing	*The system stores and updates crop, irrigation, fertilizer, expenses and farm activity records.*	*High*
5	Reporting	*The system generates farm, crop, activity and expense reports for the farmer.*	*High*
6	Business rules, etc.	*Farmers can add, update and delete farm records, and required fields must be completed before saving.*	*High*
7	Compliance to laws or regulations	*User and farm information should be stored securely and access should be restricted to authorized users.*	*Medium*
8	*Other*	*The system provides a dashboard to view important farm information in an organized way.*	*Medium*

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	*The system should load pages and display farm information quickly.*	*Page loads should normally complete within **2–3 seconds** under normal usage.*
2	Scalability	*The system should support an increasing number of farmers, farms and records.*	*The system should support multiple users and growing farm data without major performance problems.*
3	Security & Data Privacy	*User login information and farm records should be protected from unauthorized access.*	*Only authorized users can access or modify their farm information.*
4	Reliability & Availability	*The system should work reliably and preserve saved farm data.*	*Saved records should remain available whenever the system is accessed.*
5	Usability & Accessibility	*The system should have a simple and user-friendly interface that farmers can understand easily.*	*Users should be able to add and view farm information with minimal steps.*

6	*Other*	*The system should be easy to maintain and update.*	*New farm management features should be added without affecting existing modules.*
